

Electronic car sharing systems

Access to success

Skopei believes happiness equals freedom, for both organisations and users, to move in a clean and liveable world by sharing vehicles together.

Our smart hardware makes this possible by easily managing vehicles while providing visibility into vehicle information, location data and trip tracking. Combined with our software label, called Topology, Skopei optimises the entire process around sharing and managing cars and other vehicles.

Our solution gives leasing companies, fleet managers, dealers, rental companies and mobility providers complete freedom to decide how they want to use their vehicles, resulting in time savings on administrative costs and improved efficiency.

Customised approach for every vehicle

Skopei's hardware is designed to meet the needs of various organisations, which deploy different vehicles for a wide target audience. Our software can be used for smart pool car systems, as well as for rental companies looking to engage in on-demand rental.

In addition to our car-sharing system, we offer several variants of trackers for trip registration. You can confidently choose the efficient solution that suits you, ranging from trackers with only trip registration to the complete solution of our car-sharing system including trip registration and tracking.

Car sharing system

Unlock the full potential of our all-in-one solution for managing, sharing, and renting vehicles with remote keyless unlocking. Our car sharing system grants you access to a wide range of features, including location data, detailed vehicle information, and precise trip registration. It enables effortless vehicle management, suitable for both small and large enterprises. Our technology facilitates the sharing and renting of your vehicles to others.

Tracker

Our tracker provides essential information about your vehicle's performance. Gain insight into routes taken, distances covered, and average speeds, providing you with a detailed overview of your vehicle usage. Moreover, the built-in trip registration function offers a convenient way to comply with tax requirements.

Tracker OBD

With our OBD Tracker, you can obtain real-time information about the location of your vehicles. The OBD Tracker provides accurate data on the vehicle's position, and its Plug & Play design ensures quick and effortless installation. Immediately after installation, the tracker is operational, and you can access all information via Topology. Additionally, the OBD Tracker offers a convenient way to comply with tax requirements through its built-in trip registration function.

Tracker Pro

Discover Tracker Pro, where it is possible to benefit from real-time location data as well as receiving detailed vehicle information and trip registration. With advanced features, it is possible to gain a comprehensive understanding of vehicle usage, maximizing efficiency and cost savings.

Choose Topology

Skopei believes in flexibility and freedom, by using our software label Topology. Use Topology to reserve, manage items and gain insight into the usage of your fleet. Topology is available as an app and online environment for booking and unlocking a vehicle. As an organisation, there is its own management portal.

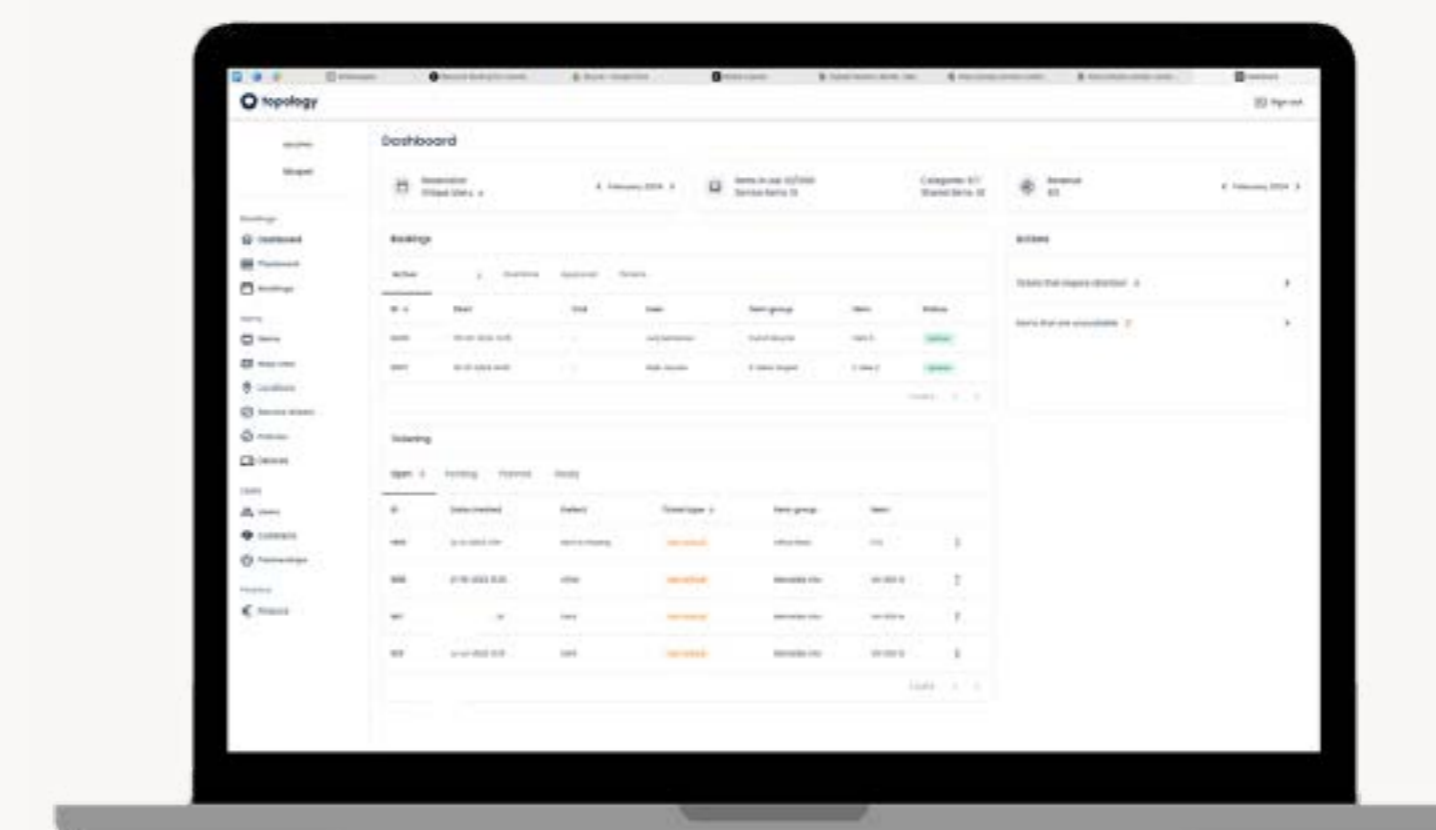

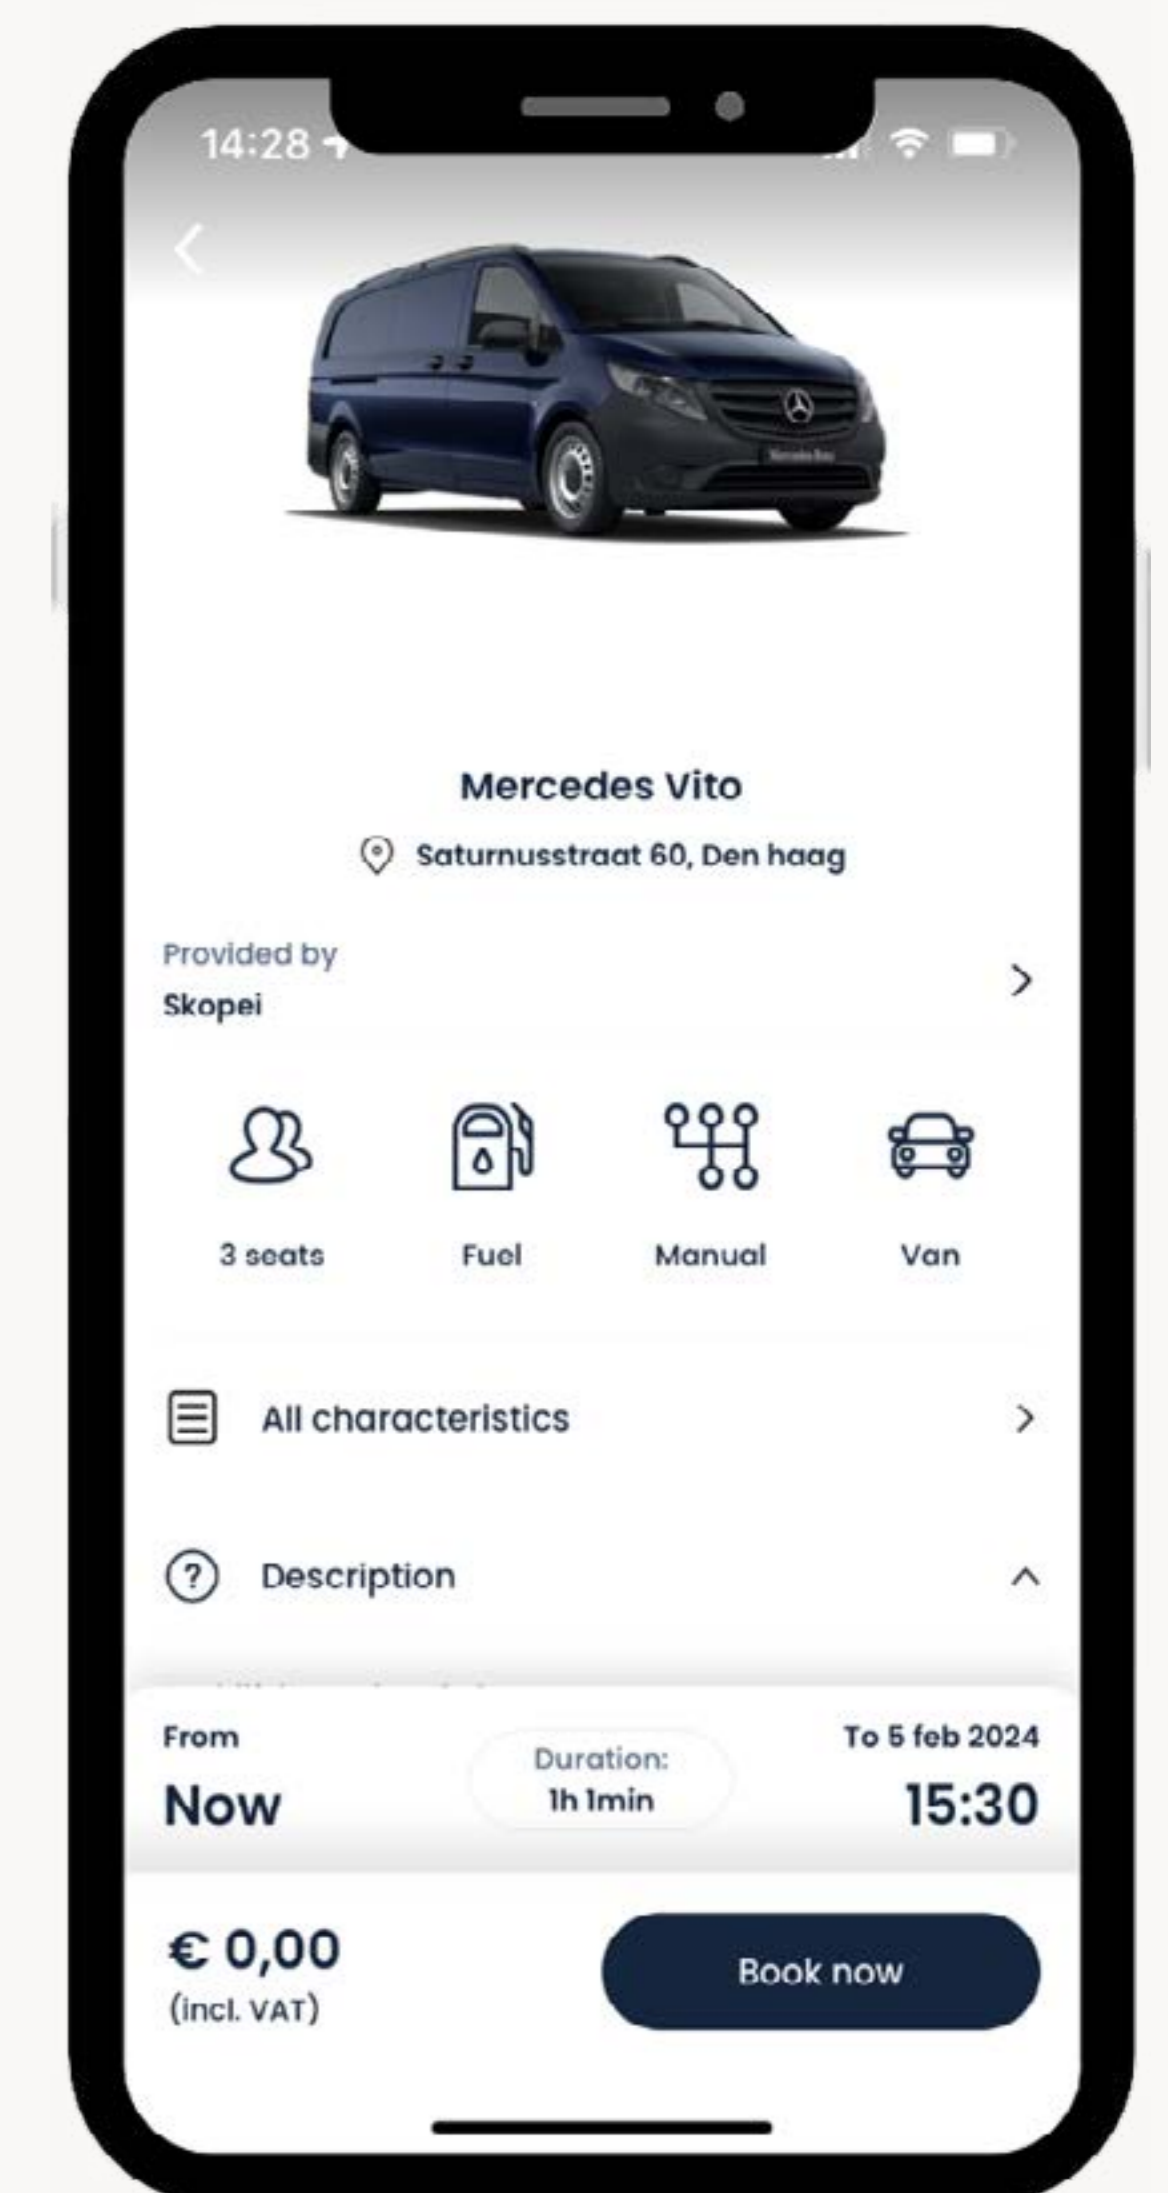

Topology

Access management

With Topology, vehicle sharing and management has never been easier. Topology provides advanced access management, allowing users to easily access shared vehicles based on authorisation level. Organisations can easily set access to vehicles, thereby maintaining control over usage and access on cars.

Insights and analysis

Nothing is more important than knowing who accessed your vehicles and when. Our car systems always come equipped with a real-time tracker connected to the Topology platform, providing you with 24/7 insight into user activities and vehicle status information.

Topology App

Our Topology app, available for iOS and Android, is a true Swiss army knife, packed with convenience features, including Mobile Access. With this, every user can instantly see which vehicles are accessible. With a simple swipe, any vehicle can be unlocked. Skopei car-sharing systems also work offline with the Topology locks, ensuring you always have access to your vehicles.

Simplified management

Anytime, anywhere access to your vehicle or pool cars. The Topology Admin Cloud is available on your smartphone, tablet or PC. Through your own access rules, you provide access to vehicles to whom you want. Get insight into routes driven, costs, which cars are used more or less, by whom and at what times.

Topology Admin Cloud

Real-time location

With Topology, you always have real-time access to the location data of every vehicle. This enables you to efficiently manage and optimize your vehicles for maximum customer satisfaction.

Vehicle information

Through our system, organisations gain access to comprehensive vehicle information, including model details, maintenance status, and mileage records. This enables you to better maintain your vehicles and ensure that customers always step into reliable vehicles.

Trip registration

One of the most important functions of Topology is trip recording, which allows for tracking exactly who used which vehicle, when and for how long. This not only provides useful insights into the usage pattern of the vehicle, but also enables precise billing and administration.

Keyless unlocking

With Topology, you can effortlessly share and rent out your vehicles to individuals of your choice, whether they are your own employees or individual users. Thanks to remote keyless unlocking, users can gain access to vehicles effortlessly, eliminating the need for physical key handovers.

Reservations

Reservations can be quickly and easily viewed in the Topology admin cloud. It's possible to find all details per reservation such as when the trailer reservation was made, who made the reservation, whether it was booked for business or personal use, and the revenue generated by the reservation.

Payments

User transactions are integrated into the Topology app. For private purposes, users will need to verify a payment method, after which automatic debits occur every two weeks. For organisations, all revenue and expenses incurred by employees can be easily tracked in the Admin panel. Additionally, there's an overview of received invoices.

Driver license verification

With Topology, driver's license verification for your organisation is handled, ensuring only verified users have access to your vehicles. The digital verification system checks driver's licenses for legitimacy via the RDW system. Users easily identify themselves with their driver's license through a step-by-step process to activate their account, granting them immediate access to the fleet.

Vehicle management, sharing, and rental **For whom?**

Are you a leasing company, fleet manager or dealer and rental company seeking a way to efficiently set up and deploy your supply vehicles or smart pool cars? Our smart hardware and Topology software help boost the use of sustainable mobility, save costs and optimise the utilisation rate of your fleet.

Leasing companies

As a leasing company, you can experience numerous advantages from our car sharing system and platform. These include keyless access to vehicles, expansion of service offerings, precise insights into the usage and location of shared vehicles, and our integrated trip registration feature, providing a tax-compliant solution.

Fleet managers

Discover the advantages as a fleet manager, including precise trip registration for leased vehicles with dedicated drivers, keyless access to pool cars, insights into vehicle maintenance status, and a convenient ticketing system for support.

Rental agency/dealerships

The electronic locks can be easily mounted on existing doors without the need for drilling. The mounting slots provide you with ample flexibility in adjusting the door. Available with and without keyholes for added convenience.

Alphabet Client case

Alphabet Share, formerly Alphacity, is Alphabet Netherlands' new label that uses Skopei's hardware and software solutions to offer its existing and new customers business shared mobility. For example, Alphabet Share customers equip their pool cars with Skopei hardware, allowing employees to book and use vehicles through the Topology app without the need for people or key transfers. Skopei's all-in-one solution then gives them insight into the status of the pool cars and provides tax-proof trip registration.
